

# **P3-aquaclean**

# **P3-aquafeed**

Pre-treatment and cleaning of membrane systems in the Water Filtration Area

- Decreased downtime of membrane systems
- Increased performance
- All products are both liquid and water-soluble

# P3-aquaclean range

Product	Short Description	
P3-aquaclean SCR scaling	acid-based	blend of inorganic acids to remove calcium carbonate and sulphate
P3-aquaclean ACS	acid-based	blend of organic acids and anionic surfactants to remove scaling, organic colloidal fouling and biofouling
P3-aquaclean BUF	neutral	blend of complexing and sequestering agents to assist in the cleaning of acidic insoluble sulphates of calcium, barium and strontium
P3-aquaclean LST	neutral	blend of anionic and non-ionic surfactants, highly effective against colloidal and other organic deposits; in conjunction with microbicides effective against biofilm
P3-aquaclean ENZ	neutral	blend of anionic surfactants and different enzymes, highly effective against colloidal and other organic deposits
P3-aquaclean LAC	alkali-based	surfactant-based blend of dispersants to remove organic residues and biofouling
P3-aquaclean SAL	alkali-based	surfactant-based blend of dispersants to remove organic residues and biofouling

# P3-aquafeed range

Product	Short Description	
P3-aquafeed IPP	potable water	blend of inorganic phosphates to prevent scaling
P3-aquafeed OPH	process water	blend of highly effective sequestering agents to prevent scaling

Detailed product recommendations are available via our CD-ROM "P3-Membrane Care" or can be given on special request.

In order to help us better understand your requirements, please consider the following when requesting additional information:

Membrane type: spiral, tube, flat sheet ...  
 Material: polyamide, ceramics ...  
 Limits: pH, chlorine, temperature ...  
 Product: surface water, waste-water ...  
 Problem: capacity, retention ...
