

VORTEXX™ provides control of yeast and mold organisms during container rinsing.

PROBLEM:

A major beverage processor was using an aseptic cold fill process for juice products. Prior to filling, the empty containers were rinsed with peracetic acid. Because a high level of peracetic acid was required to achieve the processor's quality goals, workers complained about the odor of the use solution.

SOLUTION:

Replace conventional peracetic acid sanitizer with *Vortexx*.

RESULTS:

Vortexx sanitizer provided results against yeast and mold organisms, at 1/3 the use concentration of peracetic acid. Plant workers indicated much lower odor from the *Vortexx* use solution. Due to the reduced use concentration, the beverage processor also lowered the overall cost of sanitizing.
