

QUADEXX™ IMPROVES SAFETY AND STREAMLINES SANITATION PROGRAM AT A MIDWESTERN MEAT PROCESSING FACILITY

PROBLEM:

A Midwestern meat processing facility was using fifteen different sanitation chemicals including both liquids and powders to clean the facility. All sanitation chemicals were manually dispensed and mixed nightly, creating a potential safety hazard.

SOLUTION:

Install a Quadexx M2 system to dispense all sanitation chemicals.

RESULTS:

The Quadexx M2 immediately streamlined the sanitation program by reducing the number of sanitation chemicals from fifteen to eight. This was achieved by customizing the sanitation program from the broad Quadexx product line for the plant's specific cleaning needs.

All former manual chemical dispensing and mixing activities were eliminated by the automated dispensing feature of Quadexx, creating a safer work environment
