QUADEXX™ REDUCES SANITATION CHEMICAL USAGE AND IMPROVES OPERATOR EFFICIENCY AT A NORTHEASTERN SEAFOOD PROCESSING FACILITY

PROBLEM:

A Northeastern seafood processor was using drum pumps to manually dispense all sanitation chemicals. The labor-intensive process often resulted in chemical spills increasing product usage and safety and environmental hazards.

SOLUTION:

Install a Quadexx M3 system for all chemical dispensing.

RESULTS:

The automated dispensing feature of Quadexx eliminated virtually all chemical spills improving safety and reducing overall sanitation chemical usage. Quadexx also reduced the time required to fill all product allocation containers. The time savings allowed sanitation operators to focus on other sanitation related tasks.
