

VORTEXX™ improves pre-op on meat fabrication conveyors.

PROBLEM:

A Midwest meat slaughter establishment had significant APC results from pre-op testing on conveyor belts.

SOLUTION:

Use Vortexx Liquid Acid Sanitizer for intermittent belt treatment during production at 2600 ppm (2 oz per 6 gallons).

RESULTS:

Daily interval spraying of Vortexx Liquid Acid Sanitizer improved the ability of sanitation to clean the belts reducing pre-op APC results day-after-day.

Vortexx Liquid Acid Sanitizer resulted in:

- Improved sanitation
- Reduced risk to product contamination
- Greater process control
