

Run your store
with confidence.

Let Ecolab help keep pests out of your operation and off your mind.

Consumer research has shown that while 96% of shoppers won't complain to store management, they'll tell an average of 10 people about a pest sighting.

Source: Progressive Grocer

Consumers want to shop in a clean environment where they trust that the food they buy is safe. Pests give consumers the perception your store is unsanitary and can create food safety issues that could potentially close your store.

As a food retail operator, you strive to meet consumers' expectations for cleanliness while also controlling pests across a large footprint, with many pest access points. The unique pest pressures in diverse departments like produce, deli, meat and bakery, as well as high staff turnover, compound your challenges even more.

When you partner with Ecolab, you can have confidence that you are maintaining a clean, pest-free operation. Our experienced and highly trained Service Specialists are armed with proven protocols and the industry's most innovative products and equipment. You can count on them to help you:

Enhance customer satisfaction and help protect your reputation by providing a clean, pest-free store.

- ▲ Comprehensive coverage provides protection against the pests that threaten customer satisfaction, in all departments.
- ▲ Proactive approach prevents pest issues from becoming problems and helps you provide a positive shopping experience to customers.
- ▲ Discreet service and products deliver protection without alarming or disrupting customers.

Prevent pests from jeopardizing food safety.

- ▲ Responsive service and proprietary protocols put food safety front and center.
- ▲ Highly trained Service Specialists bring issues that contribute to pest activity to your attention, so you can correct them before pests have a chance to spread germs and disease.

Better manage your food and operational costs to maximize profitability.

- ▲ Proactive protection helps prevent pest issues before they result in product returns, inventory damage and other costs.
- ▲ Educational tools teach staff best practices for preventing pest issues that might disrupt business and reduce profitability.

Comprehensive pest protection for grocery stores.

Ensure pests don't jeopardize your operation.

Designed exclusively for the demands of food retail operators, our program delivers everything you need to eliminate pests throughout your store.

- ▲ Proactive protection from rats, mice, cockroaches, flies, small flies, stored product pests, ants and occasional invaders
- ▲ Highly trained Service Specialists with food safety knowledge
- ▲ Discreet service; quick response
- ▲ On-site consultation and educational materials
- ▲ Products and services designed to deliver high-quality service with low total environmental impact

RATS AND MICE love to sneak into your store through gaps around pipes, conduits or under delivery doors. Ecolab Service Specialists regularly inspect for structural issues and follow an outside-in approach to keep rodents out.

STORED PRODUCT PESTS indicate a sanitation issue and could lead to bigger problems if found in a sold product. Ecolab will partner with you to help identify the breeding source and implement preventative sanitation practices.

FLIES can contaminate uncovered food in your deli and produce departments. Our outside-in approach first minimizes the population outside your store, then uses discreet, patented solutions to eliminate those that get in.

COCKROACHES harbor and breed in tiny cracks and crevices in your food handling areas. Our proven process flushes them out, kills them quickly, then treats the harborage sites so these pests don't become established and threaten food safety.

ANTS AND OCCASIONAL INVADERS like spiders and centipedes give consumers the impression your store is unsanitary. Your Service Specialist knows the best treatment methods to stop crawling insects before they enter your store.

SMALL FLIES thrive in food retail environments, feasting on fermenting produce and breeding in floor drains. Ecolab will eliminate existing populations, treat their habitats, and provide structural and sanitation consultations to keep infestations at bay.
