# PROTECT YOUR WATER PROTECT YOUR PATIENTS

Contamination risk from incoming water

When it comes to patient safety, the quality of your water is a top concern – and relying on the municipal water treatment process is not enough.

Complex building systems, water stagnation issues and inadequate disinfection practices are all factors that make waterborne pathogens difficult to control.

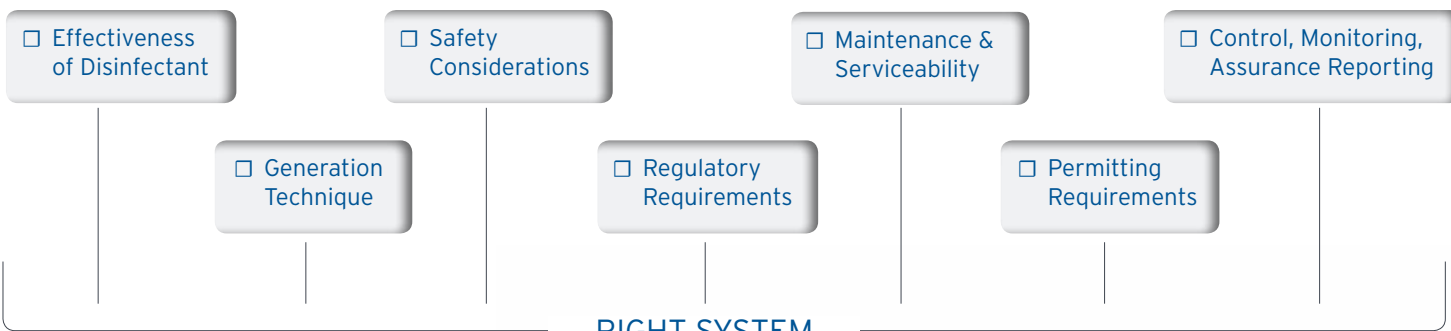

A 200 bed hospital could easily use **100,000 gal/day**

**42-50% HAI's**  
*Pseudomonas*  
Infections linked to Building Water Systems
